| and the second s |           |  |  |

### Description

Located on State Highway 365 at the point where it crosses the Union-Pacific Railroad tracks, the Amboy Overpass is of the open masonry substructure type. It consists of a total of twelve spans, the longest of which measures 80 feet. The total length is 573 feet, with a deck width of 30 feet and an overall width of 36 feet. The eleven sets of reinforced concrete piers support the bridge, as do the reinforced concrete abutments. A reinforced concrete balustrade runs the full length of the deck on each side.

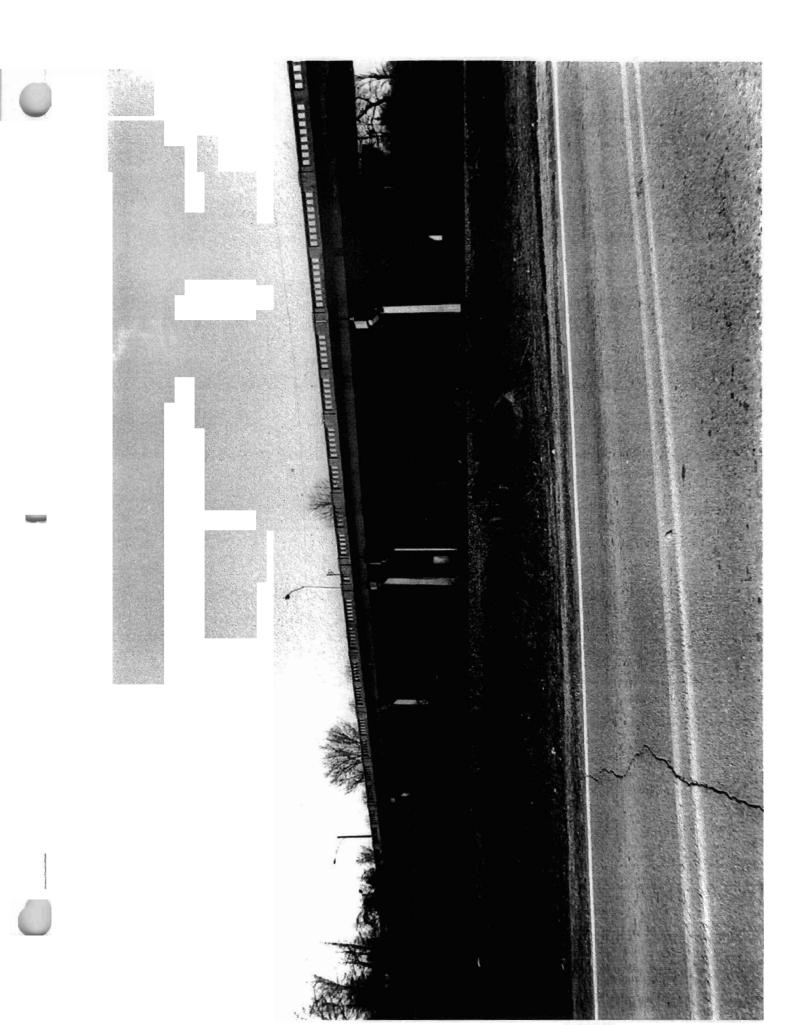

### United States Department of the Interior National Park Service

|------------------|----|------|---|--|--|--|
|                  |    |      |   |  |  |  |

### Significance

Constructed in 1941, the Amboy Overpass is associated with the World War II Era historic context and is of the open masonry substructure type. It was erected by the contractor J. P. McNulty in conjunction with the Arkansas State Highway Commission and the Federal Works Agency Public Roads Administration. Given its relatively intact condition it retains sufficient integrity to remain associated with its historic period; it is thus locally eligible under Criterion C.
