Describe present and historic physical appearance:

Summary:

The CCC Company 3767 Powder Magazine Historic District consists of two small stone and concrete structures originally constructed to store powder and blasting caps for use by the Civilian Conservation Corps working in the Ouachita National Forest.

Elaboration:

The CCC Company 3767 Powder Magazine Historic District consists of two small stone and concrete structures

originally constructed to store powder and blasting caps for use by the Civilian Conservation Corps working in the Ouachita National Forest.

The powder magazine is the larger of the two buildings. It sits north of J59P road 117 meters northeast of the smaller blasting cap magazine. It is a rectangular structure building measuring about nine feet long on its north and south sides and seven feet on the east and west sides. In addition, there is a protruding, wraparound stone wall on the east side of the structure. It is inset about one foot from the northeast corner of the building, then protrudes east about three feet, then runs about nine feet south before turning west for another three feet. It may have served to shield any explosions within the structure. The powder magazine is about five feet high with a four-inch thick concrete top and a concrete floor. The cut-stone and concrete walls are about one foot thick. There is a door in the east façade of the structure. The structure is in good condition.

The blasting cap magazine is the smaller of the two buildings. It sits just southwest of the end of J59P road 117 meters southwest of the larger powder magazine. It is a square structure building measuring about four feet long on each side. In addition, there is a protruding, wraparound stone wall on the east side of the structure. It is inset about one foot from the northeast corner of the building, then protrudes east about three feet, then runs about five feet south before turning west for another three feet. It may have served to shield any explosions within the structure. The blasting cap magazine is about five feet high with a four-inch thick concrete top and a concrete floor. The cut-stone and concrete walls are about one foot thick. There is a door in the east façade of the structure. The structure is in good condition.

8. Statement of Significance

Certifying official has considered the significance of this property in relation to other properties: Local.

Applicable National Register Criteria: A, C

Criteria Considerations (Exceptions): NA

Areas of Significance: Social History
Conservation

Period(s) of Significance: 1935-36

Significant Dates: NA

Significant Person(s): NA

Cultural Affiliation: NA

Architect/Builder: Civilian Conservation Corps

State significance of property, and justify criteria, criteria considerations, and areas and periods of significance noted above:

Civilian Conservation Corps Company 3767 was formed on June 1, 1935, at Warrensburg, Missouri, and moved to Jessieville, Arkansas, on July 8, 1935. The company constructed the nominated powder magazine and blasting cap magazine to store explosives for use on road and bridge construction or for other such conservation projects within the Ouachita National Forest. Company 3767 was transferred to Camp Hollis in December 1936.

Though they are of simple, functional design, the structures in the Civilian Conservation Corps Company 3767 Powder Magazine Historic District remain significant by virtue of their association with the contributions to American social history made by the CCC and through their associations with the emphasis on conservation that comprised the original mandate of the CCC. They are thus eligible for listing on the National Register of Historic Places under Criterion A with local significance within the historic context "Facilities Constructed by the Civilian Conservation Corps in Arkansas, 1933-1942."

The structures also are significant under Criterion C with local significance by virtue of their unusual design. The protruding, wraparound walls on the east sides of both structures may be unique to these buildings among all of the explosives structures erected by the CCC within the Ouachita National Forest; there are no other known buildings that share this characteristic.
